

PRESS RELEASE

WALLMATE® HIGH TENSION FABRIC MOUNTING SYSTEM CREATES SOUND ENVIRONMENTS AND BEAUTIFUL WALLS

*Wallmate makes
its European
debut at
BATIMAT*

(November 7, 2005) – Fabric Wallmount Systems LLC

WALLMATE HIGH TENSION FABRIC MOUNTING SYSTEM makes its European debut at BATIMAT, the Salon International de la Construction at Porte de Versailles, Paris, November 7-12.

Designed to cover acoustical wall treatments, Wallmate enables any installer to align, stretch and tension user-supplied fabrics to walls without staples. Edges are clean and finished, a major improvement over traditional European installation methods that depend upon staples, welting or gimp.

The system can transform any wall regardless of condition. Tools are standard and installation follows simple steps. Wallmate is efficient because it allows fabric to be readjusted, removed and replaced for décor change or repair.

Applications include home theaters, conference and business areas, sound and recording studios, restaurants and hotels ... the system is used "Wherever a wall goes." The Wallmate system is currently in use at a Saudi Arabian palace, a sultan's museum, and in the 950,000 square foot Staples Center Sports Arena in Los Angeles.

For 25 years, Fabric Wallmount Systems has been a pioneer in the development of high tension locking fabric systems.
